What is claimed is:

1

2

3

3

4

5

- 1. A wire mesh filter, comprising: a knitted wire mesh having a longer dimension and a shorter dimension, folded along the longer dimension so that the shorter dimension is effectively halved, and rolled into a spiral geometry.
- 1 2. The filter of claim 1, wherein the wire is comprised of a high temperature alloy.
 - The filter of claim 1, wherein the spiral has no central opening.
 - 4. The filter of claim 1, wherein the spiral has a central
 - 5. The filter of claim 1, wherein the wire is electrically conductive.
 - 6. A regenerable particulate trap having a wire mesh filter, the filter being regenerated by resistive heating, wherein the improvement comprises a wire mesh filter, comprising: a knitted wire mesh having a longer dimension and a shorter dimension, folded along the longer dimension so that the shorter dimension is effectively halved, and rolled into a spiral geometry.
